Assignment/Report Cover Sheet

Student Name	Student Id Number	Signature
DARRYIELL KARLLEN	103793	
RAYME RYAN ANAK ROXY	106122	
MUHAMMAD MARWAN HAKIM BIN ABDUL MALIK	105252	
SIMON LAU SHAO XUN	106339	
NUR FATIMA DAMIA BINTI MOHAMMAD YAZIS	107468	

Subject Code:	TMT2703

Project Title:	TMT2703 UIUX Project KUTS Sarawak Metro

Due Date: 8 JUNE 2026	Date Submitted:	7 JUNE 2026

This cover sheet must be completed, signed and firmly attached to the front of the submission. All work must be submitted by the due date. If an extension of work is granted, an assignment extension acknowledgement slip must be signed by the lecturer/tutor and attached to assignment. Please note that is your responsibility to retain copies of your assignment.

Plagiarism and Collusion are methods of cheating that falls under Peraturan Akademik Universiti Malaysia Sarawak para 11: Etika Akademik

Plagiarism
Plagiarism is the presentation of work which has been copied in whole or in part from another person's work, or from any other source such as the internet, published books or periodicals without due acknowledgement given in the text.

Collusion
Collusion is the presentation of work that is the result in whole or in part of unauthorized collaboration with another person or persons.

Where there are reasonable grounds for believing that cheating has occurred, the only action that may be taken when plagiarism or collusion is detected is for the staff member not to mark the item of work and to report or refer the matter to the Dean. This may result in work being disallowed and given a fail grade or if the circumstances warrant, the matter may be referred to a Committee of inquiry for investigation. Such investigation may result in the matter being referred to the University Discipline Committee, **which** has the power to exclude a student.

Upon placing signature above, I certify that I have not plagiarized the work of others or participated in unauthorized collusion when preparing this assignment.

I also certify that I have taken proper case in safeguarding my work and have made all reasonable efforts to ensure that may work not be able to be copied.

Qualitative Feedbacks:

When we asked the respondents if they encountered any difficulties when searching for places of interest (e.g., Vivacity Megamall) or filtering locations within a 5km radius? Most respondents found the map and search functions easy to use, convenient, and clear, with no major difficulties in filtering locations. One respondent suggested adding the name of the place of interest for better location understanding. Other than that, a respondent mentioned encountering minor bugs, and another stated that they sometimes faced difficulties due to inexperience with online searches for places. On the other hand, the app's process was generally described as intuitive, simple, straightforward, user-friendly, and easy to follow, with respondents indicating that finding the nearest station and accessing the ticketing page was convenient and smooth. The app's helpfulness was noted for people who might get lost, with users relying on the map, auto-location detection, and tracking maps for GPS. To make the process smoother, one respondent suggested implementing a one-tap transition, and another recommended using deep linking to digital wallets. Another point of improvement was to show each stop on the route.

The respondents also described that the design is clean and attractive. However, one respondent requested that the design be more standardized, and another suggested the layout should match and optimize for different types of phones such as iPhones and Androids. The accessibility features, particularly the voice search, were found to be helpful, very convenient (especially for older people), and contribute to a more user-friendly & accessible experience. Lastly, one respondent suggested that one-handed usability should be added. This is done by placing the search bar and key action buttons at the bottom right of the screen, which makes it incredibly easy to navigate while on the move.

System Usability Scale (SUS) Testing Results:

Respondent	Q1	Q2	Q3	Q4	Q5	Q6	Q7	Q8	Q9	Q10	Total	Normalized Total (* 2.5)
1	4	3	4	2	4	3	4	3	4	1	32	80
2	3	3	3	2	4	1	3	3	2	1	25	62.5
3	3	3	4	2	3	3	4	4	4	2	32	80
4	4	0	3	2	4	3	3	3	3	2	27	67.5
5	2	2	2	3	3	2	2	4	2	1	23	57.5
6	3	3	3	4	3	3	3	3	3	3	31	77.5
7	2	2	2	2	2	2	2	2	2	2	20	50
8	2	4	2	2	2	2	1	1	3	2	21	52.5
9	3	2	4	2	3	2	3	2	4	1	26	65
10	2	3	3	4	2	0	3	3	2	3	25	62.5
Average:											26.20	65.50

After conducting the System Usability Scale (SUS) testing with 10 target users, we obtained a score of 65.50, which is graded as a C. This marginal score also indicates that the UI design is in a good grade but still requires more changes to its user flow and more proper elements to help with the navigation. Based on the score, it also indicates that the UI is easy for users to learn who are using the app for the first time. From the table above, we can also conclude that most of the users will not often need technical support or a guide video when using the app daily.

Our group also noticed that six of the respondents voted that our interface is inconsistent in the filter interface. We agreed with this as we also realized that the design for the after-filter page is not having the same design as the other pages which can raise confusion among users. In conclusion, the app is good to be used but it requires some modifications before being able to be used publicly and more testing needs to be done before the release of the app.
